### Lottery mechanism

1. We take the 14789900 block of the Ethereum mainnet as the initial lottery block number, which is expected to occur at 10:00 am (UTC+8) on May 17, 2022;
2. Sort all the remaining addresses in the lottery in ascending lexicographical order, starting with 0;
3. The number of the winners this time is the block hash value corresponding to the current lottery block number and the remainder after taking the modulo of the total number of participants in the lottery;
4. Remove this winning address, and use the lottery address to generate a new SHA256 hash value for

- the next lottery;
5. Each round selects 75 winning addresses;
  6. The lottery block number plus one;
  7. Repeat steps 2-6 for a total of 10 times.

#### *Lottery example*

Assuming that 9 people participated in the lucky draw, there are 2 winners, the lottery block number starts from the 12282650 block of the Ethereum mainnet,

List of addresses for 9 people:

```
[  
  "0x5c357c78ff1c24b35c4d9cd07454e998f4bc3fea",  
  "0x66dec9b38a4181063444ad66fc32abc6b1146cca",

```

After sorting in ascending lexicographical order, and numbering from 0:

Therefore, the number of the first winner is 3 and the address is  
0x66dec9b38a4181063444ad66fc32abc6b1146cca.

The second round of the lucky draw list is:
